

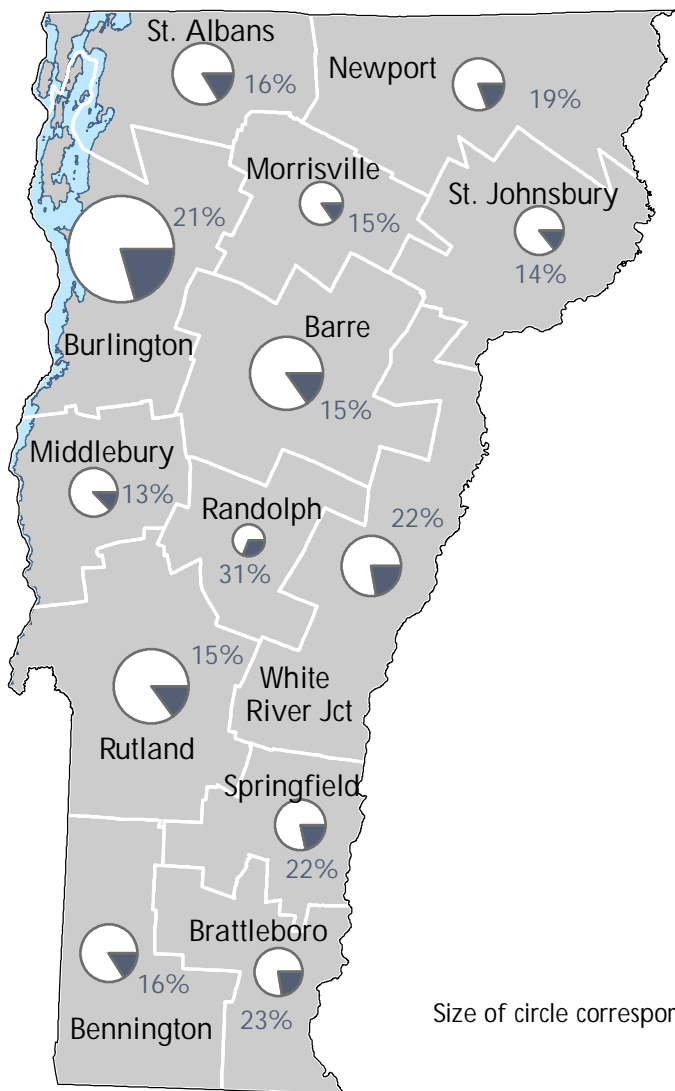

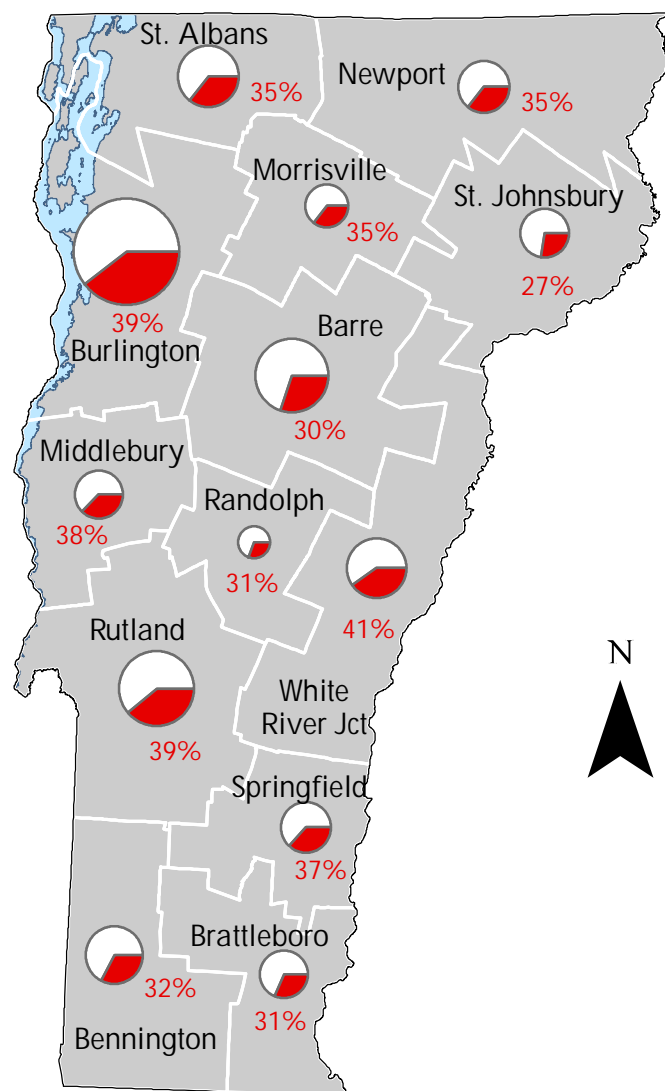

Map 3: Primary Care Visits and Blood Pressure Control (NQF 0018) among Vermont Adults Diagnosed with Hypertension, by Hospital Service Area (HSA), 2017

Proportion of HSA Residents with No Primary Care Visit for Hypertension

Blood Pressure Not in Control

Size of circle corresponds to HSA population size.

Data Notes: Data shown represent continuously enrolled members with a history of hypertension, ages 18-85 years. Primary care visits defined as having a procedure code indicative of a preventative, well, or sick visit and a diagnosis code of hypertension. Blood Pressure control represents members whose last recorded blood pressure measurement in the Blueprint clinical data registry was in control (<140/90 mmHg).

Data Source: Green Mountain Care Board (GMCB) Vermont Health Care Uniform Reporting and Evaluation System (VHCURES), 2017; Blueprint for Health Community Health Profiles, 2017.

All analyses, conclusions, and recommendations provided here are solely those of the Vermont Department of Health and not necessarily those of the GMCB.
